21 2020 Spokesperson Profile: Rob Paulsen
Thank you for being a part of the 22nd Annual Oral, Head & Neck Cancer Awareness Week® (OHANCAW®), April 13-19, 2020.

You have joined a nationwide initiative aimed at:

- Raising awareness of oral, head and neck cancer
- Educating on the importance of early detection
- Screening as many individuals as possible, especially those at high risk
- Saving lives!

We are providing this OHANCAW® Media Outreach & Publicity Guide to assist your center in promoting your educational screening events. Provided below are tips to enhance your media relations outreach and your overall social media campaign.

In addition, to get you started, included are links to the customizable press (news) & matte (feature article) releases, the OHANCAW® poster and flyer, as well as a 2020 OHANCAW® fact sheet.

**Timing is Everything: Start Now**

Start your media outreach today. Reporters are often working on stories several weeks in advance. Because OHANCAW® is quickly approaching, be sure to contact your media outlets as soon as possible. The potential for a longer feature story is greater if the reporter has more time to research story angles and interview your designated spokespersons.
Getting Listed in Your Community and Local Media Outlets’ Event Calendars

Having your local newspaper or community websites list your OHANCAW® screening is a good way to get started. Do a bit of research on the community calendar listings with your local organizational groups and media outlets. Remember that these calendars could appear only once a week or on a continuous basis, so call early to make sure your screening is listed in the appropriate week’s calendar or request it to run consecutive weeks leading up to OHANCAW®.

Thinking Local

To maximize interest among your local feature or health reporters, consider including local angles relevant to the story, such as:

- Local spokespersons
- A local patient success story
- Regional statistics or discussing any clinical trials on oral, head and neck cancer being conducted at your facility
- Local area fact sheet
- Remember what may be of interest to a national reporter may not be to your local reporters.

Building the OHANCAW® Brand

We appreciate your center/facility utilizing the media and promotional materials provided. With the hundreds of centers/facilities promoting OHANCAW® in the weeks leading up to and during Awareness Week, it will maximize awareness and bring wide-scale attention to this life-saving campaign.
Capturing Your Event in Photos

It’s a great idea to capture photos of your screening event. Why? They can be used to thank your participants via social media, publicize your future screening events, and they can help HNCA continue to build excitement and interest in the OHANCAW® brand. If you plan to take photos during your event, consider the following:

1. Confirm any existing photography policies your institution may have that may limit or prevent photographs being taken during the event.
2. If taking photos of specific individuals, either posed or candid, please ensure they sign the HNCA Photo Release form.
3. If you are taking small group shots, either candid or posed, you do not need to obtain a signed release from every participant, but do ensure they know how photos may be used by your institution and/or HNCA.
4. Photos of general attendance (e.g., a wide shot of your entire event area) do not require a signed release.
5. Some ideas for photos include images of an individual being screened, your event setup, signage, crowds of attendees, your volunteers (especially those wearing the OHANCAW® volunteer t-shirts provided by HNCA), your representatives being interviewed by media, etc.
6. At the conclusion of your event, we encourage you to submit your photos, along with any signed photo releases, to HNCA. Please scan and email the photo releases, along with photos in .jpeg or .png format, to dalena@headandneck.org.
CONDUCTING A SUCCESSFUL OHANCAW® CAMPAIGN

Customizing the Press Release & Fact Sheet

The customizable press release is designed to assist you in announcing OHANCAW® activities in your community. The press release can be provided to members of the media or any other interested parties. To customize the press release, please be sure to insert the screening or event locations, dates, times, and details about any additional activities, such as seminars, that may be planned. A quote from your local spokesperson and a brief description about your center/facility’s role in the community certainly will enhance your news coverage. The fact sheet on oral, head and neck cancer may be of additional use to your local media.

Circulating the Bylined Matte Release
(“Ten Minutes that Could Save Your Life”)

Unlike a basic press/news release, a matte release is longer, has a byline, and is more suitable for use as a feature article. Feel free to provide the matte release when submitting information to local newspapers. Simply add your name as the author of the article, insert the information about your local screening, and send to health or feature editors at your local newspaper. Weekly newspapers, in particular, frequently publish this type of localized and useful health information for their readers.

Targeting the Media

Once you have personalized your press materials, email, fax, or mail them to your local newspaper, television, and radio feature or health reporters. To publicize your screenings throughout the entire community, it is important to contact as many media outlets as possible, including daily and weekly newspapers, ethnic and religious publications, radio talk show programs, and
TV medical producers. Most of these media outlets now have websites or an online presence where you can access contact information for the respective editors or producers.

**Following Up to Encourage Coverage**

Contacting reporters after sending the press materials is key. It’s one of the most important steps in securing media coverage. Try to find out what story topics or angles are of interest to local reporters. For example, if the reporter is most interested in profiling cancer survivors, identify a compelling patient who could be available for interviews. Another reporter may be more focused on the newest clinical findings and be more interested in speaking to a researcher from your institution instead.

When conducting your media relations outreach, be sure to be responsive to inquiries from both the media and your spokespeople. It is also important to be accurate with the information you provide. Earning the trust of those involved will go a long way in ensuring a successful publicity campaign.

**Featuring Local Spokespersons**

One of the best ways to localize your story is to profile spokespeople who are associated with your center. Try to have available at least one oral, head and neck cancer survivor or current patient who can share a personal story of what it is like...
to be diagnosed, treated, and how your center has helped him/her to manage his/her care. In addition, it will be beneficial to have a health care professional available during your outreach to ensure that important screening and treatment messages are communicated and questions are accurately answered.

Also, consider whether there are any prominent members of the community whom you could include as spokespeople, such as respected civic leaders or sports figures who have a relevant personal or family connection to oral, head and neck cancer, perhaps as patients themselves or as caregivers.

It is always a good idea to provide spokespeople with some training or guidance as to what to expect when being interviewed by reporters. Patients and health care professionals typically have little practice in speaking to the media, so advising them to keep their remarks informative, yet concise, might be helpful. Also, remind physicians to use layman’s terms, instead of clinical or technical language. Reporters prefer sound bites and quotes that are understandable to the general public.
Social media is one of the most efficient ways to promote your OHANCAW® activities. Below are sample social media campaigns for Facebook and Twitter that you may customize and use to promote your activities.

### Facebook

To make the most of your Facebook posts, consider the following:

- Post and promote all relevant event information either in your post, or within the accompanying graphics (see our *customizable social media graphics*, which are easily edited through Adobe Acrobat). **Remember to include the date, time, and location of your event.**

- Encourage feedback from friends/followers about the importance of early detection and screening.

- Encourage those in your Facebook community to share your OHANCAW® posts with their own Facebook friends/followers.

- Include the #OHANCAW and #EducateScreenTreat hashtags as well as tagging the Head and Neck Cancer Alliance’s facebook page **@headandneckcanceralliance** whenever possible.

- Use Facebook’s “Schedule” feature to prepare all your posts in advance and schedule them for automatic posting. To do this, simply click the drop-down arrow next to the “Publish” button when writing a post. Choose “Schedule” instead of “Publish,” and enter the date and time you’d like your post to go live. **Hint:** You can also select a date and time for the post to stop appearing in your followers’ newsfeeds. This is useful if you’re planning multiple posts per day, or have time-sensitive posts (for example, you may wish to have your event-related posts stop appearing in newsfeeds once the event has concluded).

### Post

<INSTITUTION NAME> is hosting a FREE oral, head and neck screening as part of the 22nd annual Oral, Head and Neck Cancer Awareness Week (OHANCAW), April 13-19. Members of our community are invited to receive a free oral, head and neck cancer screening from trained medical professionals on <DATE> at <LOCATION> from <TIMES>.

Oral, head and neck cancer refers to cancers that arise in the oral cavity (mouth), larynx (voicebox), pharynx (throat), sinuses, nasal cavity or salivary glands. Worldwide in 2020, there will be more than 650,000 new cases of oral, head and neck cancer diagnosed and approximately 330,000 deaths from these cancers. In the U.S., there will be 65,000 new cases and 14,600 deaths. Early detection and screenings are proven to save lives.

![FREE SCREENINGS](image-url)
Are you ready for the 22nd annual Oral, Head and Neck Cancer Awareness Week (OHANCAW), April 13-19? Voice actor Rob Paulsen joins @headandneckcanceralliance as its official spokesperson, urging everyone to “toon” in to the importance of early detection and get a FREE screening during OHANCAW®. <INSTITUTION> is offering a screening on <DATE> at <LOCATION> from <TIMES>. Screening is a quick, painless 10 minutes that could save your life.

**FREE SCREENINGS**

April 13–19, 2020

www.headandneck.org

#OHANCAW
Have you noticed a red or white spot in your mouth that doesn’t heal or that has increased in size? Or do you have a sore throat or swollen tonsil, changes in your voice, a lump in your neck, or an earache?

<INSTITUTION> is hosting a FREE oral, head and neck screening as part of the 22nd annual Oral, Head and Neck Cancer Awareness Week, (OHANCAW), April 13-19. Members of our community are invited to receive an oral, head and neck cancer screening from trained medical professionals on <DATE> at <LOCATION> from <TIMES>. Early detection and screenings are proven to save lives.

When voice actor and 2020 OHANCAW spokesperson Rob Paulsen found a lump in his neck, he thought it a swollen lymph node due to a viral infection. After several months, when the lump did not go away, he sought the advice of his doctor. Soon, he had a diagnosis of HPV-related throat cancer. Head and neck cancer symptoms can be easy to overlook. That’s why screening is important—early detection saves lives. <INSTITUTION> is offering a free oral, head and neck cancer screening on <DATE> at <LOCATION> from <TIMES>. Screening is a quick, painless 10 minutes, that could save your life. Read Rob’s story! http://bit.ly/2J13oKC

(Suggestion: Download and customize this graphic in Adobe Acrobat! Or use one of the generic images instead.)
Did you know that the incidence of throat cancer is rapidly increasing among young adults? This dramatic increase in cancer of the tonsils and base of the tongue is attributed to infection with human papillomavirus (HPV), a potentially cancer-causing virus that can be transmitted through oral sex. In 2018, HPV-related throat cancer surpassed cervical cancer as the most common HPV-related cancer in the U.S.

<INSTITUTION> is hosting a FREE oral, head and neck screening as part of the @headandneckcanceralliance Oral, Head and Neck Cancer Awareness Week (OHANCAW), April 13-19. Members of our community are invited to receive an oral, head and neck cancer screening from trained medical professionals on <DATE> at <LOCATION> from <TIMES>. Early detection and screenings are proven to save lives.

(Suggestion: Download and customize this graphic in Adobe Acrobat! Or use one of the generic images instead.)
The face of head and neck cancer is dramatically changing. A disease that used to primarily affect older adults in their 60s and 70s with a history of smoking is now affecting younger adults (30s, 40s, and 50s), just like 2020 OHANCAW spokesperson and voice actor, Rob Paulsen. Human papillomavirus (HPV) is responsible for this shift in the cancer population. In fact, HPV-related throat cancer recently surpassed cervical cancer as the most common HPV-related cancer in the United States. It’s impossible to know whether you have an HPV infection, which is why screening for oral, head and neck cancer is so important. <INSTITUTION> is offering a FREE screening on <DATE> at <LOCATION> from <TIMES>. Screening is a quick, painless 10 minutes, that could save your life.

(Suggestion: Download and customize this graphic in Adobe Acrobat! Or use one of the generic images instead.)
According to the National Cancer Institute, tobacco and alcohol use are major risk factors for oral, head and neck cancer, particularly those of the tongue, mouth, throat and voice box. People who use both tobacco and alcohol are at greater risk for developing these cancers than people who use either tobacco or alcohol alone.

<INSTITUTION> is hosting a FREE oral, head and neck screening as part of the @headandneckcanceralliance Oral, Head and Neck Cancer Awareness Week, (OHANCAW), April 13-19. Members of our community are invited to receive an oral, head and neck cancer screening from trained medical professionals on <DATE> at <LOCATION> from <TIMES>. Early detection and screening are proven to save lives.

(Suggestion: Use a photo you took at your screening event!)
Twitter

To make the most of your tweets, consider the following:

- Post and promote all relevant event information. Due to its 280 character limit (includes spaces), it will be easiest to include this information in your accompanying graphics. (see our customizable social media graphics, which are easily edited through Adobe Acrobat). Remember to include the date, time, and location of your event.
- Include the #OHANCAW and #EducateScreenTreat hashtags as well as tagging the Head and Neck Cancer Alliance’s Twitter pages @hncalliance and @ohancaw whenever possible.
- As with Facebook, you can prepare all your posts in advance and schedule them for automatic posting. It is not possible to do this directly through Twitter. Instead, use TweetDeck.
  - Login to your Twitter account from the TweetDeck platform.
  - Click on the Tweet button at the top left.
  - Enter your tweet text into the white box.
  - Click the “Add images or video” button to add your image.
  - Click the “Schedule tweet” button to specify the date and time you’d like the tweet to go out.
  - Finish by clicking on the “Tweet at <date/time>” button beneath the white box where you entered your text.

Maybe you’ve never heard of Rob Paulsen. But you’ve heard him. A lot.

Maybe you don’t know Rob Paulsen, but you know *Pinky and the Brain, Animaniacs, Teenage Mutant Ninja Turtles, Jimmy Neutron Boy Genius*, and most of the other animated projects that Paulsen has been part of as a voice actor for nearly three decades. With over 2,000 (yes, that’s right) half-hour programs and dozens of films, video games, and other animated media to his credit, Paulsen has been one of the hardest working, most in-demand, and most beloved voice artists in the industry, earning (so far) a Daytime Emmy and Peabody, and three times winning the Annie Award (for voice actors).

But he’s also just won the biggest fight of his life—defeating throat cancer after a grueling year of aggressive treatment. News of Paulsen’s lengthy illness and forced hiatus might come as a surprise to some, as upon the news of his diagnosis, Paulsen chose to keep his cancer private except for family and those closest to him in his professional career. “Everybody’s got their own stuff to deal with, and this was my turn,” he recalls today, now still recovering but officially cancer free. “I’ve had a damn good ride up to now, and if the worst had happened, it was okay, I had a 35 year run, so I didn’t feel the need to say anything.” That’s not to mitigate the particularly ironic horror of one of the
industry’s top voice actors getting a disease that attacked his very livelihood: but the same success that was now in jeopardy is the same thing that afforded him a healthy perspective.

“It was the people who I met throughout my career who were affected by cancer that were my inspiration,” he explains. Because of his beloved characters, he’s frequently met or spoken with hundreds of infirm children who had their wishes come true via a conversation with Pinky or Donatello. “Their parents keep in touch with me when those kids pass away,” Paulsen says, “saying ‘we can’t tell you how much your shows mean to our kids.’ That opportunity, to bring that into their lives, that gave me the example to deal with my own pretty intense circumstances. I had these great teachers.”

Still recovering but officially cancer-free, and with a renewed passion for his craft, Paulsen is finding some new challenges and some old familiar faces there to guide him into the next phase of his career. In addition to continuing his popular podcast Talkin’ Toons and having just set new dates for Animaniacs In Concert!, the other franchise with which Paulsen has been associated for two generations, Teenage Mutant Ninja Turtles, has returned with Paulsen for the first time assuming the role of director, getting to work on the other side of the glass. And he’s completed a memoir about his life and career titled Voice Lessons, released by Start Publishing on October 8, 2019.

Paulsen’s cancer battle has given his career even more meaning. “There are millions of people who have beaten cancer, but because of what I do for a living, it has a little more weight. It all circles back to the deep attachment people have to these characters I’ve been lucky enough to play. I can not only continue to make a living, but make a difference, and I can’t wait to use that on the biggest scale that I can.”

Learn more about Rob at http://robpaulsenlive.com/ or follow him on Twitter https://twitter.com/yakkopinky.
